## Cobra Introducer

The Cobra Introducer offers significant advantages in routine and difficult intubations. Paired with a video laryngoscope, the easy to use Cobra Introducer allows you to reach “around the corner” because of its unique telescopable navigation design, which extends and allows the user to reach the trachea fast and successfully.

With a scroll of a finger, the internal extension can be advanced beyond the end of the device into the trachea, facilitating insertion of the endotracheal tube.

Order your supply of Cobra Introducers today and join other medical professionals who believe the Cobra Introducer will be the most sought after instrument in the management of a difficult airway.

### Cobra Introducer Features:

- No training required
- High first-attempt success
- Quicker intubation time
- Less airway trauma
- No need for other introducers or stylets
- Perfect for difficult intubations
- Single-hand operation
- Maintains curvature
- Telescopable navigation
- Depth Markings on the body
- Sterile Single use disposable device
- Cobra Introducer is available in 15FR, and works with endotracheal tubes from 6-11mm

## Cobralet

The new Cobralet introducer offers significant advantages in routine and difficult intubations. Like the Cobra Introducer, without the telescopic extension, Cobralet’s unique shape holding design helps with intubations, yet it is soft and flexible to reduce potential for trauma.

Paired with a video laryngoscope the easy to use Cobralet introducer allows you to reach the trachea fast and successfully.

### Cobralet Features:

- Unique shape holding design helps with intubation, yet it is soft and flexible to reduce potential for trauma
- Hollow Channel
- Coude/Angled tip to assist with tube placement during intubation
- Familiar shape, for familiar use with no learning curve
- Depth Markings on the body
- Sterile Single use disposable device
- Cobralet is available in 15FR, and works with endotracheal tubes from 6-11mm
